# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

Another Pacific wave will clip the region today and tonight. Rainfall will favor the North Coast and NW mountain PSA's. Little, if any precipitation will fall across southern portions of the region. Amounts between 0.5 to 1.5 inches will be found across the favored areas. A strong ridge will build over the West Coast Friday and remain into the weekend. Conditions will turn drier and more stable as a result of the ridge. Afternoon temperatures will be above to well above normal during the weekend. Locally breezy and dry N to NE winds will develop late Friday and last into Saturday. Peak winds will occur Saturday morning with gusts up to 30 mph favoring the west slopes of the Cascade and Sierra ranges as well as the higher terrain found around the Bay Area and portions of the Sacramento Valley.

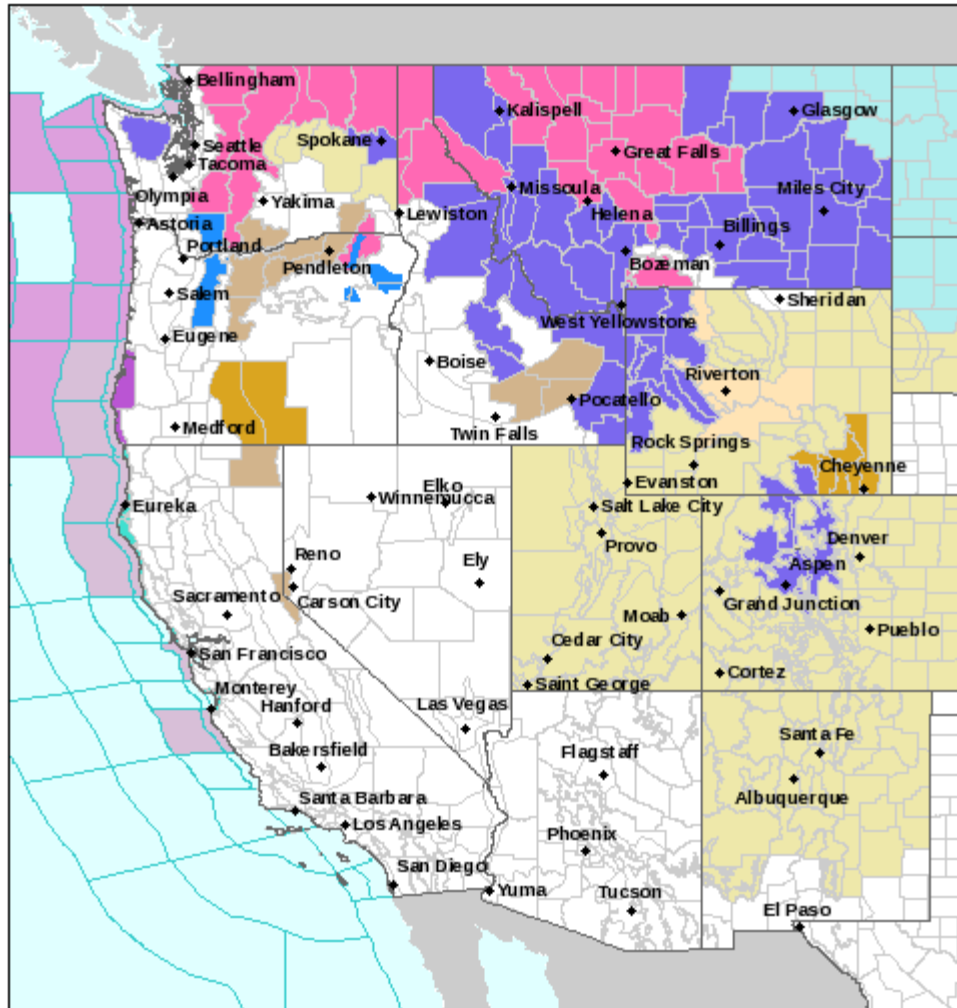

Remaining high confidence that the ridge will break down next week. This will allow another series of Pacific waves to provide precipitation chances to the region and more seasonable temperatures. Liquid precipitation results look to be in the inches and favor northern portions of the region at this time. Snow levels would initially start out higher but ultimately fall later in the week. An unusually strong jet could provide strong pre-frontal southerly winds the latter half of next week.

## **SOUTHERN CALIFORNIA**

A ridge of high pressure building into California from the Pacific Ocean will bring a warming and drying trend to the region through Saturday. Maximum temperatures will be around 5 degrees above normal today, with 50s to low 60s across the mountains and mid 60s to mid 70s in the valleys. Minimum humidity will be mainly between 15% and 30% away from the San Joaquin Valley today. By Saturday, the warmest and driest day of the next week, temperatures will be 10 to 15 degrees above normal and minimum humidity will be in the upper single digits and teens. Northeast winds of 15 to 25 mph with gusts to 40 mph will surface across the mountains and below the canyons and passes of the region Friday night through Saturday morning. The ridge of high pressure will weaken bringing a gradual cooling trend and a slow increase in humidity to the region Sunday through the middle of next week.
